Build on our Experience

CPI EuroMix – Renders for Today

Decorative renders are becoming ever more relevant to today's construction industry. Of course quality and choice are as important as ever – but efficiency, productivity and value for money count for a lot too.

Architects, specifiers and their clients want the widest choice of shades and textures to express their design concepts. They need a decorative render system that can cope, whatever the wall structure or background conditions.

Builders & contractors need the reliability of a quality product backed by the expertise of a market leading supplier.

Plastering contractors are looking for the efficiency and productivity advantages that come with spray application.

There is one decorative render system that can meet all these demands – CPI EuroMix.

Versatility and Performance

CPI EuroMix has a proven track record in supplying the demanding needs of construction professionals on residential and commercial projects alike. Our experience enables us to develop a range of decorative renders offering significant advantages over alternative options:

Straightforward product selection – EuroMix Renders are formulated to cope with the widest range of application situations, delivering a comprehensive set of solutions from just four basic products:

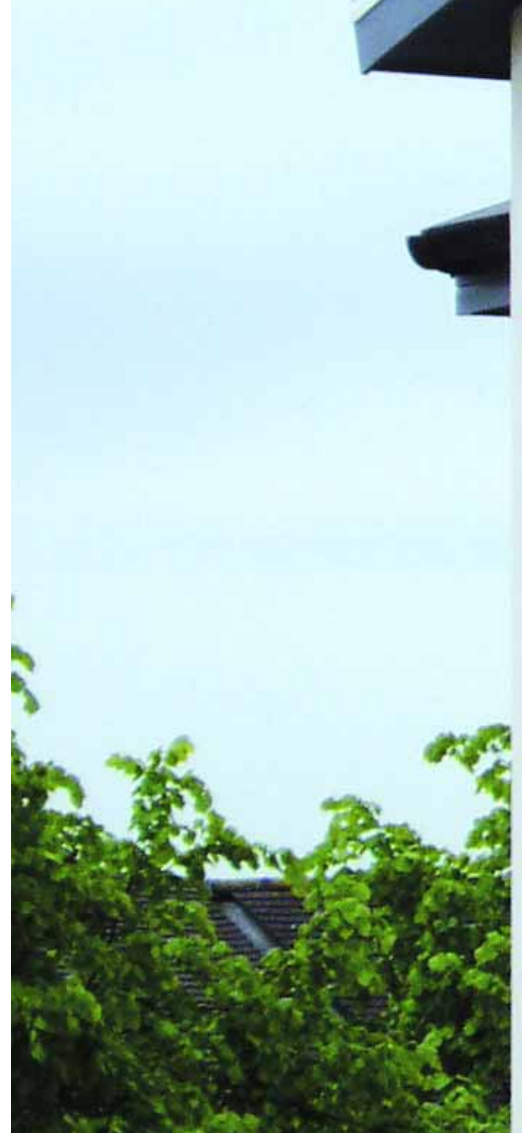

- One Coat Render.
- Dry Dash Receiver.
- General Purpose Render.
- High Bond Render.

Choice of application methods – EuroMix Renders are designed for hand or spray application. That means users can stay with the traditional hawk and trowel or join the growing number of those enjoying the productivity advantages of spray application.

Versatility of supply – The CPI EuroMix Dry Mortar System can offer various supply options depending on the requirements of the project.

- Bulk silos, mini silos, big bags or 25 kg bags.
- Remote supply to a spray machine.
- Direct discharge to a traditional mixer.

Unrivalled customer service – We listen to our customers and will continue to respond to their needs for products and systems that offer real on-site benefits.

Market Leaders in Dry Mortar Technology

CPI EuroMix pioneered the dry mortar concept and now has a network of production locations right across Britain and Ireland. Our standard mortars and renders supplied in silos are well established and offer significant benefits in terms of ready availability, reduced wastage and improved site management.

Now, following intensive research and product development, we have expanded our range to include high performance renders, offering the same high standards of quality and service. EuroMix Renders already have a track record of success on prestige projects. Our unrivalled technical know-how and expertise, combined with the uniquely personal service of our sales and customer service personnel, result in an unbeatable package.

Product Guide

CPI EuroMix Renders are produced using a carefully selected blend of cements, sands, pigments and additives and are manufactured under BSI/NSAI approved ISO 9001 Quality Systems. Renders are premixed and only require the addition of water. Mix designs are optimised for excellent adhesion, resistance to cracking or fading and outstanding weather resistance and durability. Rendered walls are water vapour permeable allowing the structure to breathe.

One Coat Render

EuroMix One Coat Render is a premium quality coloured decorative render offering an attractive, weather resistant, low maintenance finish. This material is designed for hand or spray application to most suitably prepared substrates including blockwork, brickwork or concrete and is specially formulated for a variety of rendering situations:

- For use as a through coloured single coat render.
- As a finishing coat to our General Purpose Render in multi-coat work.
- Available in an extensive range of colours (see panel). CPI EuroMix Colour Design Studio can electronically match almost any colour.
- A textured finish is achieved by scraping the render after application. The surface may be polished to give a rough stone effect. A tyrolean finish may be applied and ashlar cuts formed if required.

Dry Dash Receiver

An ideal butter coat for dry dashing, EuroMix Dry Dash Receiver may be hand or spray applied over our General Purpose Render. An extensive range of colours is available.

General Purpose Render

Designed for hand or spray application in traditional multi-coat rendering work, EuroMix General Purpose Render has multiple uses:

Internally

- For use as an undercoat or bonding coat for a gypsum finish.
- As a backing coat for ceramic tiles.
- Ideal with a wood float nap finish for painting.

Externally

- Use as undercoat for a decorative finish.
- May be applied over expanded metal lathing or rib lath.
- Ideal with a wood float nap finish for painting.

High Bond Render

A polymer modified formulation designed to cope with difficult backgrounds and to give a high quality substrate for rendering.

- Will give improved bond on low suction substrates, e.g. dense concrete or cut stone.
- Will provide a stable undercoat for friable backgrounds, e.g. random rubble and sandstone.
- May be used in external insulation systems with polypropylene scrim and mechanical fixing.
